Here are the two graphs in response to Senator McKinnon’s request to see the unrestricted petroleum revenue/production tax and credits slides going back 10 years. The earliest year available for tax credit data is FY 2007, since it was the first year under a net tax regime that incorporated tax credits as a significant part of the fiscal system. Note, unrestricted petroleum revenue includes the petroleum property tax, petroleum CIT, production tax, oil and gas hazardous release, oil and gas conservations, rents, and royalties.
